

Design mockups

Project description:

The objective of this project is to create a personal homepage that effectively showcases my project experiences, skills, and personal background. Developed as part of the CS5610 Web Development class at Northeastern University, this project utilizes HTML, CSS, Bootstrap, and JavaScript to build a visually appealing and user-friendly website.

User Personas:

Crafting a compelling and concise resume is essential to help recruiters or anyone else quickly grasp your qualifications and unique background. Start with a clear and well-structured format that highlights your key achievements, skills, and experiences prominently. Utilize bullet points, bold fonts, and strategic use of keywords to make it easy for readers to scan and absorb the most important information within seconds.

User stories:

John, a computer science major student, used his resume web page to illustrate his path from a freshman enthusiast to a proficient programmer. He incorporated a concise yet impactful narrative that highlighted his academic growth and contributions, such as leading coding projects and developing software applications.
